## Partnership Success Story

A mutually  
beneficial  
journey towards  
sustainability

ten23 health is the human-centric and sustainable strategic partner of choice for the pharmaceutical industry and biotech start-ups for the development, manufacture, and testing of tomorrow's medicines. ten23 health is strongly purpose-driven and puts patients, people and planet at the center of their decisions and actions.

With its Sustainability platform, Ascentys is on a mission to make Sustainability management more accessible to companies of all size. ten23 believes in the power of collaboration and partnerships to solve challenges and decided to partner with Ascentys to measure, track, plan, and improve their sustainability performance.

Ascentys is delighted to be partnering with a fast-paced organisation pushing the boundaries of Sustainability within the MedTech and Pharma industry in Switzerland and beyond.

## Growing together

The purpose of this partnership is to embark on mutually beneficial Sustainability journey.

ten23 brings ambitious plans and objectives, a clear vision of what "great" looks like, unrivalled expertise in Sustainability in the Pharma industry and rigorous Sustainability management processes. On the other hand, the Ascentys Sustainability Management platform will assist ten23 with measuring, managing, planning and reporting on its ESG plans so that the ten23 team can focus planning and delivering changes.

# Partnership Highlights

## 1. Streamlined Sustainability Management

- The 1st step in the partnership is under way. This consists of replacing a number of sophisticated Excel spreadsheets used to monitor and measure Sustainability across a large number of topics with a consolidated view on the Ascentys platform.
- Starting with the "Carbon Footprint" module, ten23 will then leverage the "People" module to manage JEDI (Justice, Equity, Diversity and Inclusion) topics as well as the "Sustainability" module of the Ascentys Sustainability platform to manage their overall performance across 360 Environmental, Social and Governance Indicators.
- The outcome will be an easy-to-manage platform that consolidates and centralises ten23 data, making it more formalized, robust and scalable.

## 2. Better oversight of Actions and changes

- Once ten23 has transitioned from XLS to managing its Sustainability in the Ascentys platform, the next step will be to use the system to better manage the progress of actions and objectives. ten23 will be able to track its actions directly in the platform, increasing visibility into activities across the organization and stakeholders.

### 3. Data-led decision making

- A critical aspect on ten23 roadmap is to leverage data to drive informed, transparent (reasoned and justified) decision making and prioritisation of Sustainability related initiatives. The vision is to expand on Ascentys current platform capability to perform “what if” analysis and scenario planning. These scenarios will allow ten23 to visualize potential outcomes and assess the costs/benefits impact of decisions.
- ten23 and Ascentys will define a framework and approach to streamline the analysis of cost/effort/impact in order to determine the most holistically beneficial ones.

### 4. Improved ESG Indicators

- Ascentys is delighted to benefit from ten23's expertise both in Sustainability in general and specifically as it pertains to the Pharma industry in general.

"ten23 and Ascentys are excited to embark on this collaborative and mutually beneficial journey to make Sustainability management simpler, more efficient and transparent."
